

## **NutriConsult - Interactive register of certified dieticians**

### **Project description**

The aim of the project is to create a platform for dieticians, medical doctors, professionals and the public, which will enable finding the nutritional experts according to the needs of the patient/client as well as obtaining the expert information. The records in the database will be verified and will include only contact information of the qualified dieticians, standardised procedures and national nutrition recommendations.

### **Reasons of submission**

In the Czech Republic, there are limited possibilities to obtain information on the health services provided in the area of nutrition and nutritional care. At the same time clear and comprehensive national database of nutrition recommendations and standardised work procedures for dieticians and other professionals ensuring patients/clients' nutrition, is missing.

### **Action Plan of the Implementation**

1. Preparation of the web site
2. Informing the professional public, offering experts to participate in the project
3. Formation of the database of dieticians by region and specialization
4. Formation of the database/ links, guidelines and standardised work procedures
5. Extension of the project - professional training and seminars organization with the subject of nutrition and nutritional care
6. Free database information providing
7. Interactive part for users' questions
8. Extension of the services – toll free line
9. Opening of the consultation centre including nutrition advisory center

### **Implementation**

The planning part of the work launched – May 12th, 2016

Work Conference – June 9 - 11, 2016

The preparation of web pages [www.nutriconsult.cz](http://www.nutriconsult.cz) - September 2016

First public calling - October 2016

Marketing campaign - November, December 2016

Project execution - January 1st, 2017

### **Results/ Outputs from a clinical point of view**

Patients will undoubtedly benefit from high quality nutritional care provided. Nutrition and nutritional care are an essential part of medical and health care of the 21st century – the appropriate nutritional care for everyone.

### **Findings including importance for nutrition recommendations or the project introduction in other countries**

The project will enable immediate contacts between patients and professionals and contacts between each other experts. The project will help define standardised work procedures where they are missing. The model will be modified according to national recommendations to be applicable in other countries.
